

AGREEMENT ON THE COLLECTION AND RECOVERY OF FOLDING BOX BOARD PACKAGING WASTE AND ON THE OPTIMISATION OF FOLDING BOX BOARD PACKAGING

§ 1 THE PARTIES TO THE AGREEMENT

- 1) The Norwegian Ministry of the Environment.
- 2) The folding box board packaging chain, represented by Å & R Carton AS, Ramstad Eskefabrikk AS, Trondhjems Eskefabrikk AS, the Norwegian Association of Branded Product Manufacturers, the Federation of Norwegian Food and Drink Industry, the Norwegian Grocery Trade's Environment and Packaging Forum and the Confederation of Norwegian Business and Industry.

§ 2 PURPOSE

The purpose of this agreement is to reduce the environmental problems caused by folding box board packaging waste by reducing the quantity of such waste, by packaging optimisation and by ensuring that such waste is collected and recovered whenever this is appropriate taking into account environmental and resource considerations and economic factors.

The agreement is a step in implementing the principle that the business sector is responsible for waste from its own products, and follows up Report No. 2 (1994-1995) to the Storting, the 1995 Revised National Budget and the Recommendation of the Standing Committee on Finance and Economic Affairs regarding the budget, cf. Recommendation S. IV (1994-1995).

The agreement is also intended to ensure implementation of the requirements of European Parliament and Council Directive 94/62/EC of 20 December 1994 on packaging and packaging waste, which has been incorporated into the Annex II of the EEA Agreement.

§ 3 DEFINITIONS

For the purpose of this agreement, the following definitions apply:

| | |
|------------------------------------|--|
| <u>folding box board packaging</u> | a material between paper and solid board in thickness and stiffness. The material is classified as folding box board if its weight is from 150 g/m ² and it is folded while wet/damp. Moulded fibre packaging is also considered to be folding box board for the purpose of this agreement. The term folding box board as used in this agreement does not include beverage cartons. |
| <u>packaging</u> | all products made of any materials of any nature to be used for the containment, protection, handling, delivery and presentation of goods, from raw materials to processed goods, from the producer to the user or the consumer. The term packaging does not include road, rail, ship and air containers. |
| <u>packaging waste</u> | discarded packaging. |
| <u>packaging chain</u> | all economic operators that supply raw materials for packaging, manufacture packaging, import packaging, use packaging for their products or place packaged products on the market. |
| <u>packaging optimisation</u> | continuous improvement of packaging throughout the value chain in order to maintain adequate protection of the packaged goods combined with the lowest possible use of resources and environmental impact and the highest possible degree of recycling and energy recovery. |
| <u>recovery</u> | utilisation of waste by recycling or energy recovery. |
| <u>recycling</u> | utilisation of waste in a way that wholly or partly retains the materials |

of which it consists, either directly for its original purpose or for other purposes.

energy recovery

utilisation of the energy in waste by incineration.

hazardous waste

waste that cannot appropriately be treated together with other waste because it may cause serious pollution or a risk of injury to people and animals, cf. the definition in the Regulations of 20 December 2002 relating to hazardous waste.

packaging for hazardous waste

packaging used to contain products that when discarded are classified as hazardous waste.

§ 4 SCOPE

The agreement applies to all packaging made of folding box board for all types of products, with the following exceptions:

- packaging that comes within the scope of decisions by the Storting concerning environmental taxes on packaging that are valid at any given time,
- packaging for hazardous waste.

§ 5 OBLIGATIONS OF THE FOLDING BOX BOARD PACKAGING CHAIN

5.1 Requirements concerning the waste collection and recovery scheme

The folding box board packaging chain shall ensure that a waste collection and recovery scheme is established and operated to collect and recover waste from folding box board packaging in accordance with this agreement. This can be done through a producer responsibility organisation.

The folding box board packaging chain shall seek to find systems for the collection and recovery of folding box board packaging that give the best overall solutions in socio-economic terms. It shall also seek to ensure that competition is maximised at all stages of the implementation of the waste collection and recovery scheme. Only enterprises that form part of the folding box board packaging chain or organisations that represent such enterprises may be owners of or be represented in the governing bodies of the waste collection and recovery scheme. Enterprises that are principally engaged in the collection and/or recovery of folding box board packaging waste and organisations that mainly represent such enterprises may not be owners of or be represented in the governing bodies of the waste collection and recovery scheme.

The ownership structure of the waste collection and recovery scheme shall be representative of the various parts of the folding box board packaging chain and of the enterprises and/or organisations that make up each part of the packaging chain.

Any enterprise that forms part of the folding box board packaging chain shall be entitled to take part in the waste collection and recovery scheme for folding box board packaging.

No dividend shall be paid to the owners of the scheme.

5.2 Packaging optimisation

The folding box board packaging chain shall cooperate with the packaging chains for other types of packaging in order to optimise packaging. The aim is to reduce overall environmental impact throughout the packaging chain, including the quantity of folding box board packaging waste.

The operators in the folding box board packaging chain shall be encouraged to introduce their own control regimes to ensure that packaging is optimised, using relevant standards as a basis.

An annual report shall be drawn up describing the work of the packaging chain and the results of efforts to optimise packaging, including an overview of further plans for packaging optimisation. The

report shall focus on measures that have been introduced, expertise/training and information, and shall describe changes in the quantity of packaging generated by weight (in tonnes) and the percentage change from the previous year.

The folding box board packaging chain shall in cooperation with the other packaging chains develop methods for registering developments in packaging, including changes in packaging quantities, and seek to identify the factors behind these developments. Furthermore, it shall ensure that all parts of the packaging chains receive information on this work¹, so that individual operators can use the information in their efforts to optimise packaging.

The folding box board packaging chain shall seek to ensure that the packaging they use meets the essential requirements set out in Article 9 of European Parliament and Council Directive 94/62/EC.

5.3 Targets for the collection and recovery of folding box board packaging waste

The folding box board packaging chain shall ensure that at least 60 per cent of waste folding box board packaging is recovered every year of which at least 50 per cent shall be recycled and the rest used for energy recovery.

5.4 Information

The folding box board packaging chain shall carry out any information measures necessary to ensure the implementation of this agreement.

5.5 Annual reports

The folding box board packaging chain shall ensure that annual reports are made to the Norwegian Pollution Control Authority describing how the obligations set out in this agreement are being met. The annual report shall be submitted by 1 April the following year.

The reports shall provide information on the production, import and export of folding box board packaging and on the collection and recovery of folding box board packaging waste.

Reports on packaging optimisation pursuant to section 5.2 of this agreement shall be provided in cooperation with packaging chains for other packaging materials that have concluded similar agreements. These reports shall be submitted by 1 June the following year.

The Norwegian Pollution Control Authority may draw up further guidelines on the preparation of reports, including the preparation of statistical data on packaging. Such guidelines shall be drawn up in consultation with the folding box board packaging chain. The aim is to arrive at harmonised measuring methods to be used by all the packaging chains, the Nordic countries and in the long term by all EEA member states.

§ 6 MEASURES TO BE IMPLEMENTED BY THE MINISTRY OF THE ENVIRONMENT

The Ministry of the Environment will help to provide a framework that will make it possible for collection and recovery of waste folding box board packaging to be carried out as efficiently as possible.

The Ministry of the Environment will ensure that folding box board packaging collected and recovered through other schemes than those established pursuant to this agreement is included in the evaluation of whether the obligations set out in section 5.3 have been met.

The Ministry of the Environment will seek to ensure that public procurement routines for the purchase of goods with packaging covered by this agreement include specifications requiring suppliers to participate in a system for the collection and recovery of packaging waste for the products they are to supply, for example Materialretur AS.

¹ This can for example be done by continuing to develop ways of measuring material efficiency and material use and continuing the work of measuring packaging use and distribution efficiency (projects are in progress in both these fields in Norway).

The Ministry of the Environment will as appropriate help to provide information on packaging optimisation and the collection and recovery of packaging waste.

The Ministry of the Environment shall as necessary take an active part in efforts to ensure that as many as possible of the economic operators in the folding box board packaging chain support the work of achieving the targets of this agreement and efforts to avoid "free riders" in the system.

§ 7 FINAL PROVISIONS

The waste collection and recovery scheme for folding box board packaging operates at its own risk. The Ministry of the Environment is not responsible for any agreements concluded in order to fulfil the obligations set out in this agreement.

This agreement does not prevent any person from collecting or recovering folding box board packaging or organising systems for the collection and recovery of such packaging.

This agreement is concluded with the reservation that the legislative framework for packaging may be altered as a result of decisions by the Storting or as a result of Norway's obligations under the EEA Agreement. Other significant changes in the economic, political, environmental or market framework for this agreement will be grounds for re-negotiating the agreement or parts of it.

If the parties do not agree on re-negotiation, the agreement may be terminated by either of the parties or by the parties jointly. The agreement remains in force until it is terminated by one of the parties or by the parties jointly.

This agreement terminates the agreement of 14 September 1995 between the Ministry of the Environment and the folding box board packaging chain.

Two – 2 – copies of this agreement have been issued, one to the Ministry of the Environment and one to the representatives of the folding box board packaging chain.
